## Kawasaki SXR 1500 / 160 Plug in ECU

This document is intended for use by a technical audience and describes a number of procedures that are potentially hazardous. Installations should be carried out by competent persons only.

Syvecs and the author accept no liability for any damage caused by the incorrect installation or configuration of the equipment.

Please Note that due to frequent firmware changes certain windows might not be the same as the manual illustrates. If so please contact the Syvecs Tech Team for Assistance.

[Support@Syvecs.com](mailto:Support@Syvecs.com)

## Parts Supplied:

- Syvecs SXR Plug in ECU
- External Connector and Pins
- RJ45 Cable

## Installation

- 1 Remove the Negative Terminal from the battery

- 2 Unplug the 2 connectors on the OEM ECU

- 3 Remove the OEM Ecu bracket under the steering and unbolt all the accessories including the tilt Sensor and power module.

- 4 Refit all the accessories and Syvecs Plug in ECU to the supplied Syvecs adapter bracket. There is optional space for our 100hz GPS module also.

Bolt back into the hull of the SXR

## 5 Reconnect the battery

## 6 Fix the Ethernet Cable into the hull or secure in the engine bay

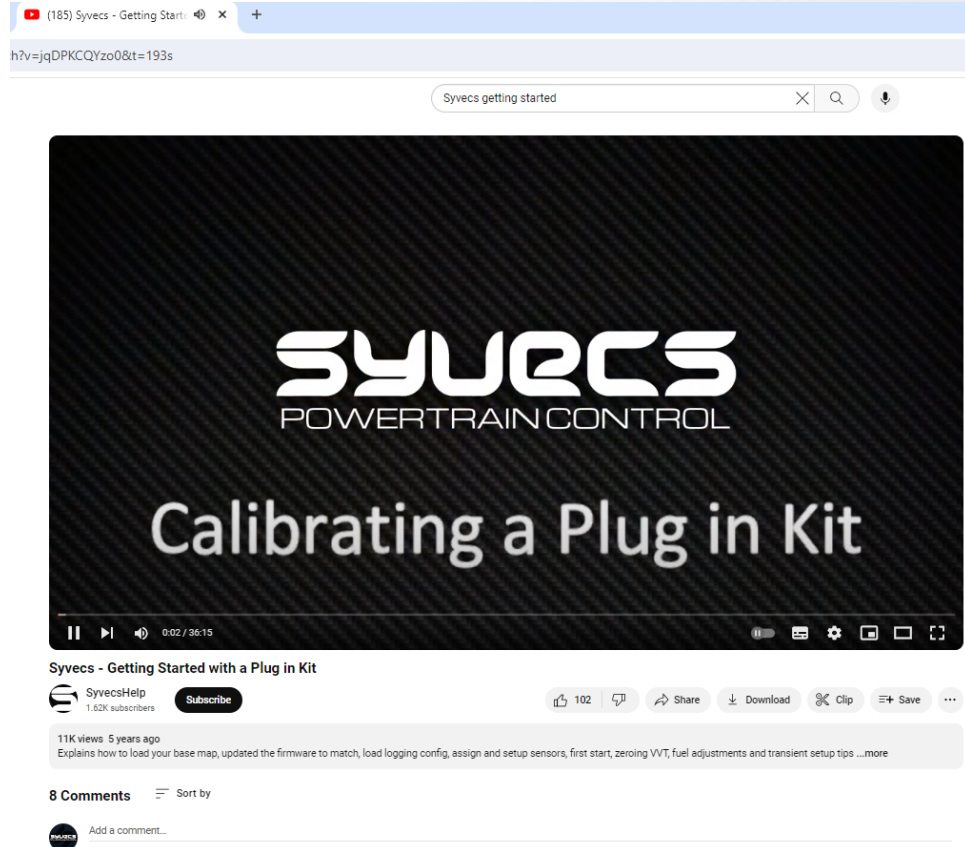

## 7 Contact [Support@Syvecs.com](mailto:Support@Syvecs.com) for base calibration

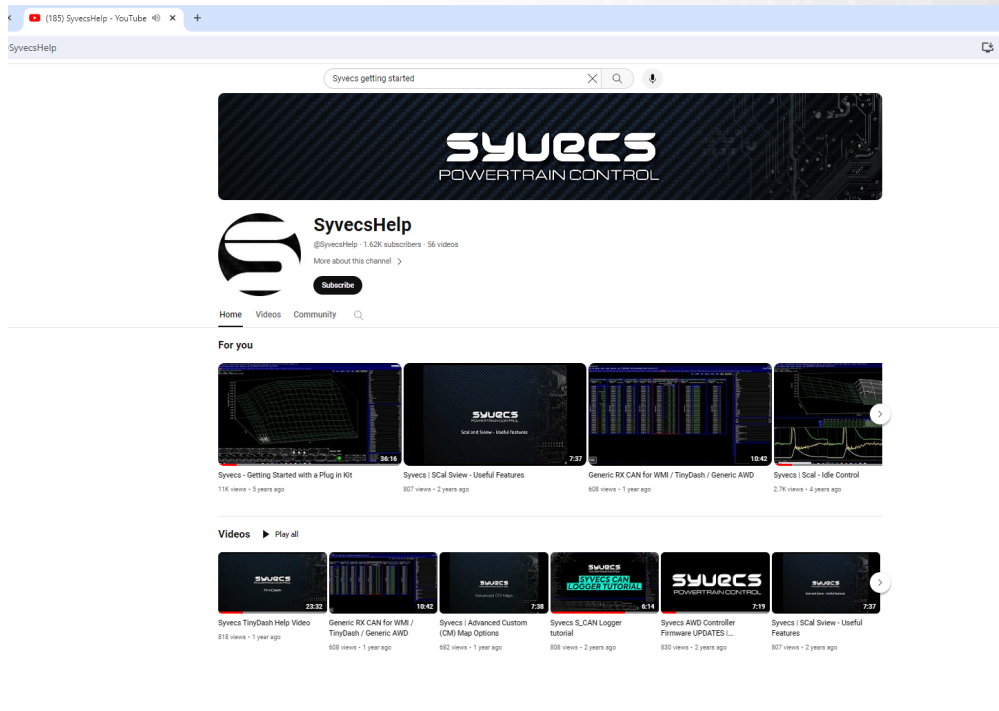

## Support / Training

Dealer Support can be obtained from [Support@Syvecs.com](mailto:Support@Syvecs.com)  
End Users Support from Syvecs Forum

A getting started help video is found here for plug in kits

## Custom Features

The Syvecs SXR plug in ECU offers a selection of unique features which make the product very powerful.

**Launch Control** - With the use of a push to make launch button on the handle bars owners can now set a RPM Limit and Boost Target (if Forced Induction) based on GPS Speed or Prop Speed Target to be maintained when stationary and launching to increase acceleration and stop cavitation.

**Knock Control** - Detonations is a big killer of engines and having a ECU able to detect Knock and control Knock on each cylinder is key when running increased cylinder pressures.

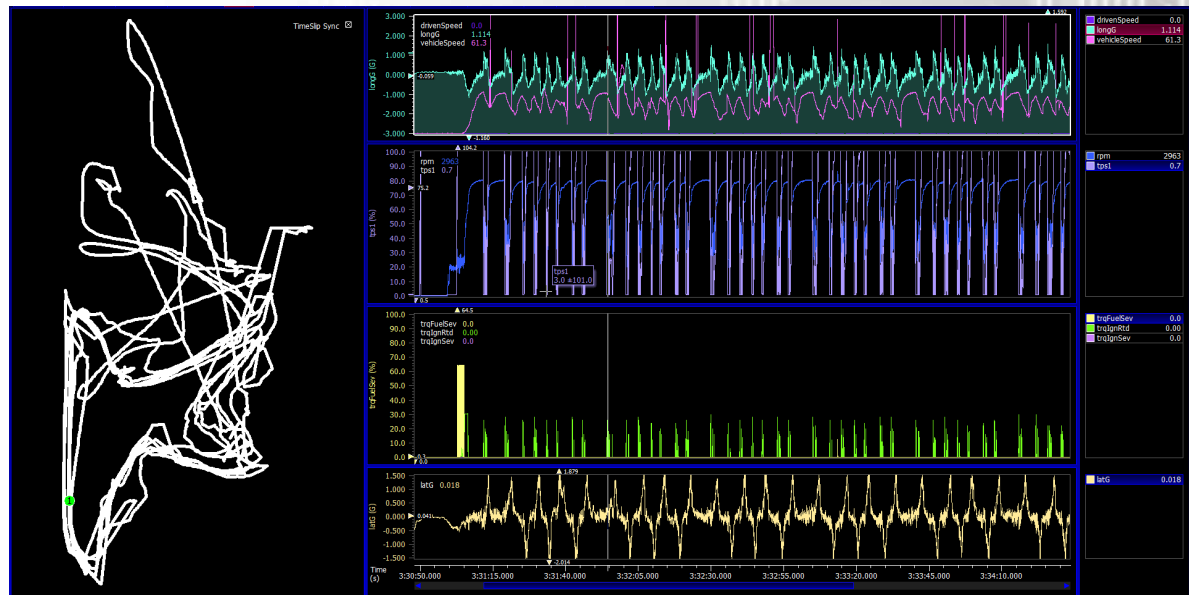

**Flex Fuel** - Users can wire in a Ethanol Content Sensor to ECU and allow the S7 to adjust the fuel tables based on the alcohol amount in the fuel system.

**Closed Loop Lambda** - The Sxr Ecu has the ability to wire in a NTK or LSU Wideband Sensor via the Aux connector. This allows the ecu to monitor and adjust the fuel mixture continuously as well as enable limps in the event of a lean event from fuel system failures.

**Fuel Pressure / Oil Pressure Protection** - Users can wire in additional fuel pressure and oil pressure sensors to monitor and protect the engine.

**GPS Support** - Our Syvecs 100hz GPS/IMU Module can also be connected to the Aux connector on the SXR Plug in ECU allowing users to track map the ski usage and monitor acceleration data from the IMU. This is really useless as it allows the calibrators/owners the ability to adjust launch and torque maps to peak efficiency maximizing g force acceleration in straight and corners.

**Individual Coils packs** - The SXR Plug in has 4 ignition outputs spare which are driven in a 0-5v TTL format. These are designed to be used with smart coils like the R35GTR coil packs which offer increased spark power per cylinder compared to the OEM wasted spark configuration.

## Expansion Connector

- 1 - Ground
- 2 - AN01
- 3 - AN02 - Launch Switch (pull to ground)
- 4 - AN11
- 5 - Knock Ground
- 6 - Knock Signal
- 7 - 5v Output (Sensor Supply)
- 8 - LamV (Grey NTK)
- 9 - LamI (White NTK)
- 10 - LamGnd (Black NTK)
- 11 - Fuel Output 9 (Blue NTK)
- 12 - Fuel Output 11
- 13 - 12v (Yellow NTK)
- 14 - IGN3 (TTL/Smart Coils)
- 15 - IGN4 (TTL/Smart Coils)
- 16 - IGN5 (TTL/Smart Coils)
- 17 - IGN6 (TTL/Smart Coils)
- 18 - K-TYPE -
- 19 - K-Type +
- 20 - ANGnd (Sensor Ground)
- 21 - CAN2L
- 22 - CAN2H
- 23 - LANRX- (Orange/White)
- 24 - LANRX+ (White/Orange)
- 25 - LANTX- (Green/White)
- 26 - LANTX+ (White/Green)
